The problem with operational coordination

Most teams are stitching together tools that were never built for the field.

Fragmented tools

Voice calls, chat apps, and maps are separate. No shared operational picture.

No accountability

Messages get lost. No one knows who received what, or who is taking responsibility.

Location blind spots

Teams can't see where people are or what is happening on the ground in real time.

What is VoxGuard?

A secure mobile platform for operational teams that need push-to-talk voice, messaging, location, and map-based events in one tool.

VoxGuard is not just chat, a map, or a walkie-talkie app. It is a shared operational view for the team. It is built for situations where message delivery, location awareness, responsibility assignment, and traceability matter.

Talk immediately

Push-to-talk voice to your group

Send and acknowledge

Priority messages with acknowledgement tracking

See the group on the map

Real-time location and availability

Mark events by location

Map-based operational events

Assign responsibility

Track progress from creation to closure

Manage users and groups

On the organization's terms

Core capabilities

Push-to-talk voice

- One-button voice transmission to a group
- Group-based voice channels
- Clear visual, haptic, and audio feedback
- Familiar radio-style operating model
- Diagnostics for troubleshooting audio issues

Operational group messaging

- Group conversations with real-time updates
- Message types: emergency, medical, security, notification, status update
- Priority messages and emergency alerts
- Acknowledgement requests and tracking
- Quick replies and targeted messages

Real-time location & availability

- User and group member locations on the map
- Online/offline states and availability view
- User-controlled location sharing and privacy mode
- Map-based situational awareness for field operations

Groups, roles & access control

- Group creation, management, and memberships
- Roles, permissions, and invitation links
- Email-bound group invitations
- Admin panel for users, roles, and account activity
- Controlled user activation and deactivation

Map-based operational events

Mark what is happening, assign responsibility, and track progress, all on the map.

Events can be created on the map and shared with the relevant group. The team can acknowledge, take responsibility for, resolve, or cancel events and follow the full timeline from creation to closure.

Create

Mark an event from any location on the map

Share

Instantly shared with the relevant group

Acknowledge & own

Team members acknowledge and take responsibility

Track

Follow the event timeline with real-time updates across devices

Resolve

Close the event when the situation is handled

Who uses VoxGuard?

Built for teams that operate in the field.

Security Services

Guard and control room communication, incident marking on a map, emergency alerts, staff location visibility, and acknowledgement tracking.

Event Operations

Coordination between security, first aid, logistics, and production. Map-based observations, team-specific channels, faster response in crowd and safety situations.

Field & Maintenance Teams

Location awareness for mobile teams, task and incident assignment, push-to-talk without phone chains, group management by site or area.

Facilities & Campuses

Situational awareness across a site, map event points, internal notifications and acknowledgements, role-based access to group information.

Home Care & Nursing Teams

Push-to-talk, alerts, location awareness, and caregiver group coordination for mobile care teams supporting people at home.

Security & trust

VoxGuard is designed for closed professional teams.

How we protect your data

- Authenticated users — only verified members access the platform
- Group- and role-based permissions — users see only what they need
- Row-level database security — data is isolated at the record level
- Protected data transfer — all communication encrypted in transit
- User-controlled location sharing — privacy mode available
- Administrative audit logging — all key actions are traceable
- No open consumer-style contact network

Our commitment

VoxGuard is not a general consumer messaging app. It is built for situations where controlled access, message traceability, and responsible data handling matter.

- Data stored in EU cloud services
- We do not sell or share data with third parties
- We do not track users across websites
- GDPR principles applied by design
- Your data is your data. Always.

Ready to see VoxGuard in action?

Let's design a solution tailored to your team's needs.

VoxGuard brings push-to-talk voice, group messaging, real-time location, and map-based events into one secure mobile platform — so your team always knows who is available, where people are, what is happening, and who is taking responsibility.

Fast coordination

Push-to-talk and priority messages when it matters

Shared situational awareness

One operational view for the whole team

Professional & secure

Controlled access, audit logging, EU data storage
