Map-Based Group Tracking in Field Operations

VoxGuard combines group locations, events, voice communication, and acknowledgments into a single operational view

Real-Time Group View

Group members are visible on the map, allowing leadership to see the situation and resources at a glance.

Location-Linked Events

Observations, tasks, and alerts can be attached to a location, so the situational picture doesn't get lost in a message thread.

Acknowledgments and Responsibilities

Leadership can see who has received a message, who is closest, and to whom responsibility has been transferred.

What is VoxGuard?

A secure mobile platform for operational teams that need push-to-talk voice communication, messaging, location awareness, and map-based events — all in one tool.

VoxGuard is not just a chat, map, or walkie-talkie app. It is a shared operational view for your team. It is built for situations where message delivery, location awareness, assignment of responsibilities, and traceability matter.

Talk instantly

Push-to-talk voice messages to your group

Send and acknowledge

Priority messages with acknowledgment tracking

See your team on the map

Real-time location and availability

Mark events by location

Map-based operational events

Assign responsibility

Track progress from creation to closure

Manage users and groups

On the organization's own terms

Core Features

Push-to-Talk Audio

- One-button voice transmission to the group
- Group-specific voice channels
- Clear visual, haptic, and audio feedback
- Familiar radio-style operation model
- Diagnostics for troubleshooting audio issues

Operational Group Messaging

- Group conversations with real-time updates
- Message types: emergency, medical, safety, announcement, status update
- Priority messages and emergency alerts
- Acknowledgment requests and tracking
- Quick replies and targeted messages

Real-Time Location & Availability

- User and group member locations on the map
- Online and offline statuses with availability view
- User-controlled location sharing and privacy mode
- Map-based situational awareness for field operations

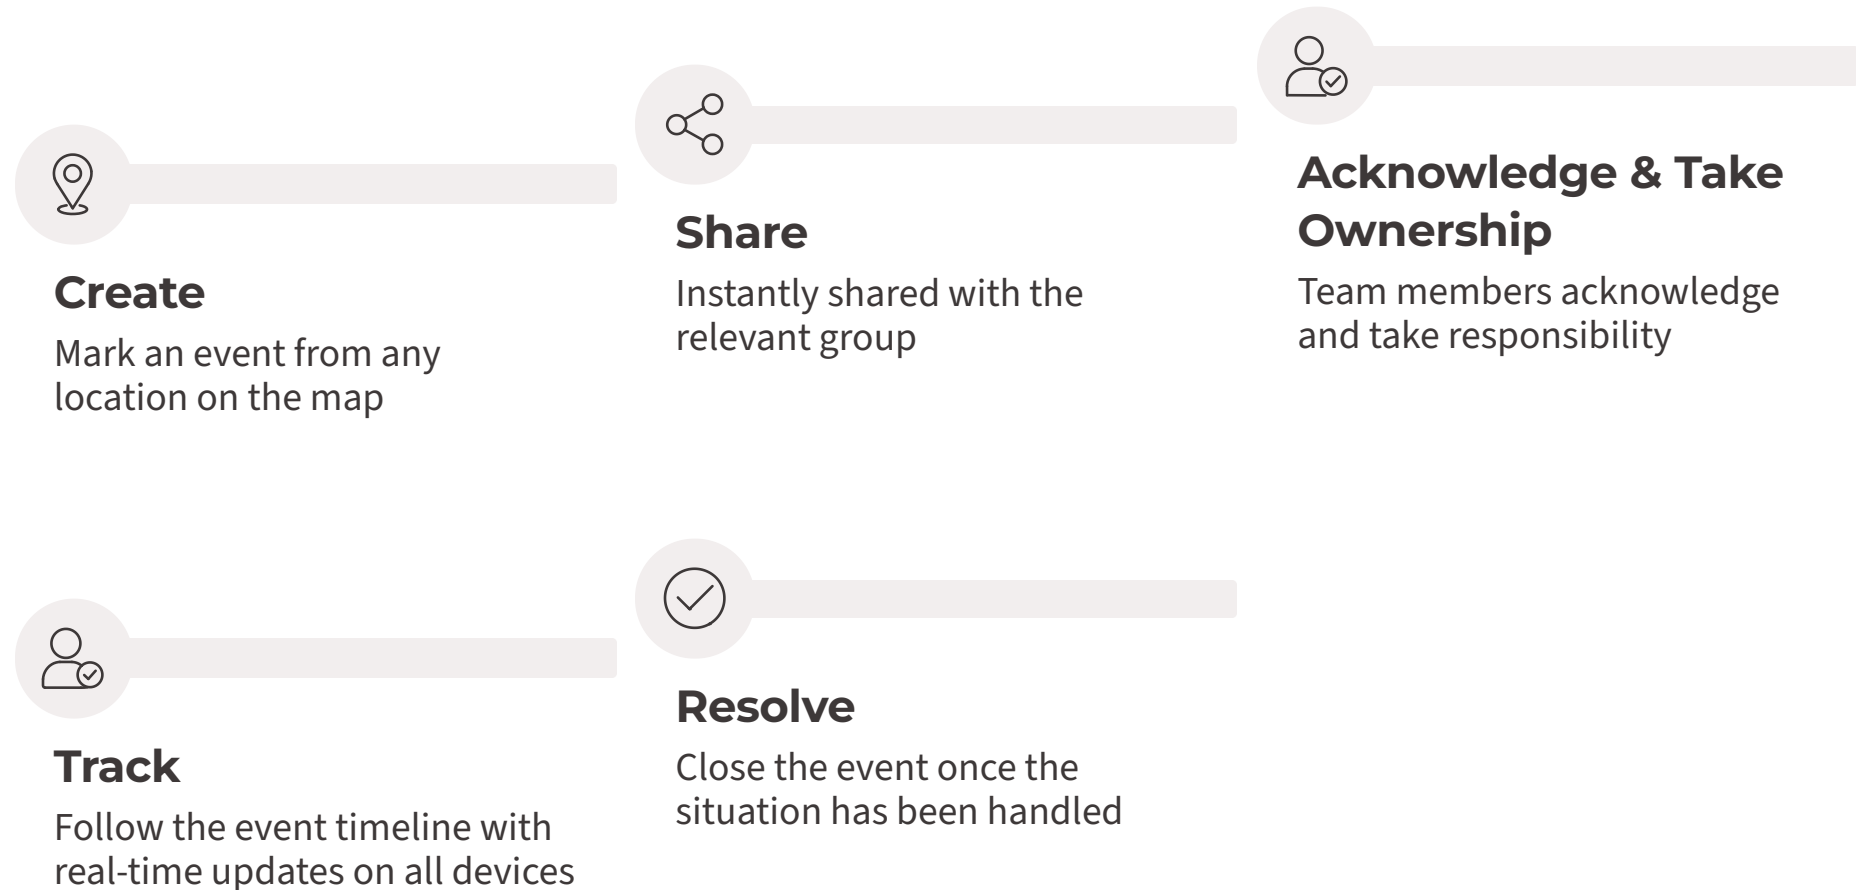

Groups, Roles & Access Control

- Group creation, management, and memberships
- Roles, permissions, and invite links
- Email-bound group invitations
- Admin panel for users, roles, and account activity
- User activation and deactivation management

Map-Based Operational Events

Mark what's happening, assign responsibility, and track progress — all on the map.

Events can be created on the map and shared with the relevant group. The team can acknowledge events, take ownership, resolve or cancel them, and track the full timeline from creation to closure.

Who uses VoxGuard?

Designed for teams operating in the field.

Security Services

Guard and control room communication, mapping incidents on the map, emergency alerts, staff location view, and acknowledgment tracking.

Event Operations

Collaboration between security, first aid, logistics, and production. Map-based observations, team-specific channels, and faster response in crowd and safety situations.

Field & Maintenance Teams

Location awareness for mobile teams, task and incident assignment, push-to-talk without a phone ring, group management by site or area.

Properties & Campuses

Situational awareness across the entire site, map markers for incidents, internal notifications and acknowledgments, role-based access to team information.

Home Care & Support Teams

Push-to-talk, alerts, location awareness, and coordination of care teams for mobile support workers assisting people at home.

Security & Trust

VoxGuard is designed for closed professional teams.

How We Protect Your Data

- Identified users — only verified members can access the platform
- Group- and role-based permissions — users see only what they need
- Row-level database security — data is isolated at the record level
- Secure data transfer — all communication is encrypted in transit
- User-controlled location sharing — privacy mode available
- Administrative logging — all key actions are traceable
- No open consumer-style contact network

Our Commitment

VoxGuard is not a general consumer messaging app. It is built for situations where controlled access, message traceability, and responsible data handling matter.

- Data is stored in EU cloud services
- We do not sell or share data with third parties
- We do not track users across websites
- GDPR principles are applied by design
- Your data is your data. Always.

Are you ready to see VoxGuard in action?

Let's design a solution tailored to your team's needs.

VoxGuard combines push-to-talk audio, group messaging, real-time location, and map-based events into one secure mobile platform — so your team always knows who is available, where people are, what is happening, and who is taking responsibility for action.

Fast Coordination

Push-to-talk and urgent messages
when it matters

Shared Situational Awareness

One operational view for the entire
team

Professional & Secure

Controlled access, logging, and EU-
based data storage
